

How To Convert Drupal to WordPress Site Like a Pro

Already decided to make a switch, but look for the easiest way for migrating from Drupal to WordPress? Make a few simple steps to reach your goals! Take these steps into consideration and your CMS migration will be as smooth as silk.

#1

Create Your CMS2CMS Account

To start your Drupal to WordPress migration, the first thing you have to do is to sign up with [CMS2CMS](#). Provide your details and choose a password. You can also sign in via your Facebook or Google account. For this, choose the appropriate option.

Specify Your Drupal Website Details

Choose Drupal as your Existing CMS and enter its URL into the provided field.

#2

#3

Connect to Your Drupal Website

Now you are to set up the connection to your **Drupal** website. For doing this, download and install [the Connection Bridge](#) to your computer.

When you've done with that, press "**Verify Connection**" button.

Indicate WordPress Website Details

Now, choose **WordPress** as your **Target CMS platform** and provide its URL. In case, you don't have your WordPress installed yet, you can try [Migration to CMS2CMS Test Site](#).

#4

#5

Build the connection to WordPress Website

Provide its URL, admin login, and password in order to install the Connector Plugin automatically.

Run Free Demo Migration

Before migrating Drupal to WordPress, CMS2CMS service offers you to **preview the future look** of your website and run Free Demo migration.

Choose the Entities and needed additional options you are going to migrate.

#6

#7

Finish the Drupal to Wordpress migration

Carefully [check the demo migration results](#), and proceed with your final **Drupal to WordPress** switch.

Order design customization and enjoy!

After pressing the 'Request Design' button you will be able to check the Design packages and select the most suitable one! That's it! Now you are a happy owner of **WordPress-powered website** with all your Drupal content on it.
